

FIELDturf®

LANDSCAPING

FieldTurf is the world's leading artificial grass system. It is not an indoor / outdoor carpet and it is not a product intended just for athletic fields. FieldTurf Landscape is specifically designed for residential lawns and commercial landscapes. FieldTurf will pay for itself over time as compared to the installation and high maintenance costs of a natural grass lawn.

The same qualities that make FieldTurf an outstanding surface for sports fields and golf courses makes it ideal for home or commercial landscaping. It is especially well suited for areas where natural grass is difficult to grow or where upkeep is impractical due to water restrictions or other environmental factors. Its durability makes it the sensible choice for high-traffic areas.

FieldTurf delivers the perfect lawn - without the need for watering or sprinkler systems, mowing, thatching, weeding, seeding, equipment storage, fertilizers, pesticides, chemical treatments and allergies.

FieldTurf's revolutionary surface gives you the lawn you want without the costly and time-consuming chores.

- Looks like real grass
- Very affordable
- Long-lasting investment
- Estimated lifespan of 15 years
- Commercial quality fibers with high UV protection
- Provides year-round use
- Suitable for most soil conditions
- Extremely low maintenance

FieldTurf is ideal for all your landscaping needs, offering an unmatched combination of beauty, durability and economy.

FIELDturf

FieldTurf Golf

First, forget everything you thought you knew about synthetic turf. FieldTurf duplicates the playing condition of natural grass while all but eliminating the cost and labor of maintenance. FieldTurf is more durable, affordable, longer lasting and safer than any other golf surface - including real grass. FieldTurf is the ultimate all-weather surface, offering maximum drainage and perfect playability, regardless of season or weather conditions. And it can stand up to continual use that would quickly degrade any natural surface. FieldTurf is, quite simply, the new turfgrass.

FieldTurfTee

This high pile, no infill, no maintenance product is the heaviest product on the market. FieldTurf Tee is perfect for high traffic tee boxes and tee lines. It feels good under foot, holds any size tee, and will withstand shots from every club in the bag.

Tee Lines and Tee Boxes

Tee lines and tee boxes are the most visible parts of any golf facility and the fastest to show wear. FieldTurf allows natural grass areas a chance to grow while providing superior appearance, play and all the cushioned effect underfoot, just like real grass.

Putting Greens

FieldTurf putting greens are the state-of-the-art solution to high maintenance costs, poor grass quality and high traffic. FieldTurf “holds” the ball upon impact and gives the golfer the desired response, according to the selected approach shot. Characteristics are predictable and putting speed is adjustable - fast, medium, or slow - according to “stimp” meter readings. Players can “read” the greens, just as they do on any natural surface. FieldTurf greens reduce maintenance costs so dramatically that the typical break-even period, including construction, is just two years.

Driving Ranges

Benefit from year round operation by using FieldTurf instead of natural grass. Irrigation and fertilization costs are virtually eliminated and losing range balls in the soft and wet grass is now a thing of the past.

FieldTurf at Home and at Work

FieldTurf can provide a trouble-free surface for backyard putting greens and chipping areas and provide beautiful, year-round landscaping for commercial establishments. And best of all, a 1,500 square-foot installation can typically pay for itself in as little as eighteen months.

Owner advantages:

- Long lasting investment
- Virtually no maintenance requirements
- Up to 15-year warranty
- Commercial quality fibers with high UV protection
- Year-round use
- Resilient to golf-cart wear and tear
- Easy on ball-picking equipment
- Quick installation with little downtime
- Replica sand traps use white grass
- Porous surface enhances drainage characteristics
- Immune to temperature extremes
- Pin placements can be pre-set to relocate
- Tees can be inserted anywhere on the surface
- Severe sloping is a design feature
- Adjustable green “speed”

Player advantages:

- Looks like real fairway grass
- Target greens become real functional targets
- The target greens are treated to “hold” the ball
- Predictable putting, even on downhill lies
- Sand traps for the target greens enhance depth perception
- Dries quickly and is playable when wet
